GIA NATURAL DIAMOND DOSSIER®

February 17, 2018
GIA Report Number 2287173890
Shape and Cutting Style Round Brilliant
Measurements 6.06 - 6.11 x 3.89 mm

GRADING RESULTS

Carat Weight 0.90 carat
Color Grade J
Clarity Grade SI2
Cut Grade Very Good

ADDITIONAL GRADING INFORMATION

Polish Very Good
Symmetry Very Good
Fluorescence None
Clarity Characteristics Feather
Inscription(s): GIA 2287173890

MULTICOLLINEARITY

Feature Engineering

Why Performing Analysis on Blue Cluster

Carat is a significant predictor

Professor's Diamond lies in the blue cluster

Using all available data may lead bias, since Lower carat and Higher carat traits may differ

Most of the data for blue cluster lies between 0.8 - 1.3 carats, which is a relatively small interval Blue cluster is more favorable under linearity assumption (Carat vs. Price not linear for the whole carat range - as given in the pdf)

Prices of Diamonds colored by Clusters

Feature Engineering Part I

Getting to know variables

Price is the prediction variable (Dependent)

Carat, Clarity, Color, Polish, Symmetry, Cut, Certification, Wholesaler are predictors (Independent variables)

Categorical Variable levels should be distinct based on their price prediction ability

Wholesaler needs to be excluded from prediction, since it is not a diamond characteristic (May introduce bias)

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Clarity

Originally had 7 levels.
Grouped to 3 levels

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Clarity	I2 I1 SI3 SI2 SI1 VS2 VS1	Flawed Naked Eye 10x Zoom Flaws 30x Zoom Flaws	Some Levels Insignificant for price	0.403	0.265

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Color

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Color	L J,K G,H,I F,D,E	Near Colorless Lightly Yellow	Some Levels Insignificant for price	0.065	0.021

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Polish

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Polish	F G V X I	F + G V X + I	Small sample size for F and I	0.149	0.133

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Symmetry

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Symmetry	F G V X I	F G V + X + I	<ul style="list-style-type: none">• Small sample size for I• Low predictive ability difference between V-X	0.141	0.133

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Cut

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Cut	F G V X I	F G V X I	<ul style="list-style-type: none">• All levels distinct• Bin Sizes are large enough	0.144	0.133

Feature Engineering Part II

Grouping Ordinal Variables by Predictive Ability

Certification

Variable Name	Original Levels	Final Levels	Levelling Criteria(s)	Original R-squared	After ReGrouping R-squared
Certification	AGS GIA EGL DOW IGI	AGS + GIA EGL + DOW + IGI	Two most respected labs vs. others	0.082	0.054

Model Selection

Model Selection

Variable Selection

- Step 1: Construct a model with all independent variables
 - Cut variable is partially significant
- Regroup Cut into 2 groups
 - Fair, Good = 1
 - Very Good, Exceptional, Ideal = 2

Call:

```
lm(formula = Price ~ ., data = professor_cluster)
```

Residuals:

Min	1Q	Median	3Q	Max
-777.74	-152.99	-3.54	149.63	683.01

Coefficients:

	Estimate	Std. Error	t value	Pr(> t)	
(Intercept)	1189.05	281.80	4.219	3.55e-05	***
Carat	776.36	231.59	3.352	0.000939	***
Colour2	265.62	47.20	5.628	5.37e-08	***
Clarity2	467.67	50.25	9.307	< 2e-16	***
Clarity3	557.34	94.33	5.908	1.26e-08	***
Cut3	51.87	63.50	0.817	0.414862	
Cut4	115.11	79.32	1.451	0.148084	
Cut5	105.61	54.89	1.924	0.055595	.
Cut6	44.53	67.46	0.660	0.509880	
Certification2	89.73	41.25	2.175	0.030652	*
Polish2	102.61	45.05	2.277	0.023695	*
Polish3	141.98	76.86	1.847	0.066007	.
Symmetry2	190.08	71.35	2.664	0.008273	**
Symmetry3	207.44	80.75	2.569	0.010845	*

Signif. codes: 0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 278.2 on 226 degrees of freedom

Multiple R-squared: 0.4577, Adjusted R-squared: 0.4265

Model Selection

Variable Selection

- Adjusted R^2 increased from 42.65% to 42.88%
- Take consideration for Cut and Polish variables because the p-value is approx. to 10%

Call:

```
lm(formula = Price ~ ., data = professor_cluster)
```

Residuals:

Min	1Q	Median	3Q	Max
-802.25	-161.47	-8.02	160.39	683.03

Coefficients:

	Estimate	Std. Error	t value	Pr(> t)	
(Intercept)	1187.63	270.03	4.398	1.67e-05	***
Carat	782.85	216.62	3.614	0.000371	***
Colour2	262.90	46.63	5.639	5.02e-08	***
Clarity2	467.22	49.34	9.469	< 2e-16	***
Clarity3	553.02	93.35	5.924	1.14e-08	***
Cut2	68.91	42.26	1.631	0.104323	
Certification2	100.21	39.99	2.506	0.012908	*
Polish2	96.89	44.67	2.169	0.031109	*
Polish3	115.84	73.58	1.574	0.116797	
Symmetry2	209.59	69.22	3.028	0.002745	**
Symmetry3	225.33	78.21	2.881	0.004338	**

Signif. codes: 0 '***' 0.001 '**' 0.01 '*' 0.05 '.' 0.1 ' ' 1

Residual standard error: 277.7 on 229 degrees of freedom

Multiple R-squared: 0.4527, Adjusted R-squared: 0.4288

F-statistic: 18.94 on 10 and 229 DF, p-value: < 2.2e-16

Conclusion

Conclusion

Final Pricing Model for Diamond

- Price for professor's diamond ring = **\$2,753.87**
- Difference from the quoted price = 346.14
- Consider the ring material

Variable	Coefficient	
Carat	782.85
